ETG Expands Initiatives in Alternative Energy, Energy Access and Sustainable Development

NEW YORK (1 December 2010) — Energy Transportation Group, Inc., today announced expanded initiatives in the fields of energy access, alternative energy and sustainable development. These fields are intended to become increasingly important sources of growth and profit for the privately held company.

Said ETG President & COO Alex Evans, “Energy access in developing countries is a critical development issue that is closely connected with mitigating climate change, improving families’ health and empowering women. Sustainability is a critical issue worldwide. ETG will continue to build on its existing competencies in partnering with leading international corporations, international organizations and host country governments to initiate and implement important large-scale projects for improved energy security and energy supply diversity, energy access and sustainable economic development.”

Areas in which new initiatives are planned or are already underway include

- Offshore wind power (Europe and Asia);
- Energy access (China);
- Energy access and natural resource development (Africa);
- Biomass energy and afforestation (Eurasia).

About The ETG Companies

The ETG family of companies is a diversified global business group that develops, finances and operates businesses, partnerships and projects worldwide in energy, technology, infrastructure and logistics. Additional information may be found at www.etgglobal.com.
